Copilot in PowerPoint
Turn your ideas into stunning, professional presentations.

With Copilot in PowerPoint, you can construct and create on-brand presentations, providing you with a solid foundation to build upon.

Copilot in PowerPoint streamlines the creation of presentations from Word documents. Simply supply Copilot with the link to your Word document, and it will automatically generate slides, apply suitable layouts, and select a theme. Leveraging Styles in Word for document organisation enhances Copilot's understanding of your content structure, enabling it to efficiently segment the document into presentation slides. Ensure that your content is structured under Titles and Headers when applicable, and Copilot will endeavor to produce a presentation based on your input.

Copilot can also assist you in achieving on-brand presentations. Starting with a branded template will let Copilot know that you would like to retain the presentation's theme and design. Copilot will then use existing layouts to build a presentation for you.
